

Port Solent Balcony Balustrades

The following is a guide to Balcony Balustrades at Port Solent to show the standard designs as built by the original developers for each house type and also to show replacement Non-Like-for-Like designs generally approved by POSOL. To preserve the original design concept of Port Solent it is generally accepted to replace Balcony Balustrades with Like-for-Like Balcony Balustrades whenever possible. A popular change however has been to replace a Timber Slatted Balustrade with a Glass Balustrade. In such cases it is preferred that the standard Glass design is followed ahead of an approved Non-Like-for-Like design. Other Balcony Balustrade designs may be acceptable to POSOL if they blend in with neighbouring properties. In such cases properly dimensioned fully detailed drawings must be submitted to POSOL for approval prior to any replacement work being carried out. Replacing Like-for-Like Balustrades with no changes will not require a drawing submission to POSOL.

For finished timber paint colours and glass panel colours please refer to the POSOL Paint Colour Guide shown on the POSOL website. (www.posol.co.uk).
